

# CIRCLE K TAIWAN SELECTS POSIFLEX FOR NATIONWIDE INSTALLATIONS

Circle K Taiwan is a convenience store chain with outlets throughout the country. There are over 450 stores in Taiwan and they are open 24 hours a day. Management at Circle K-Taiwan was faced with aging equipment and eminent danger from the year 2000 bug. Circle K management decided to replace all of their electronic cash registers and point-of-sale terminals to solve their Y2K problem and upgrade their equipment to the latest state-of-the-art. They needed more speed and diverse information from their terminals.

Circle K began a search for replacement equipment and carefully considered a number of world-renown brands, as well as POSIFLEX. After much testing and comparison, POSIFLEX was selected for their superior quality and

design. The model chosen was the POSIFLEX PST-1010 with hard drive.

All 450 Circle K stores in Taiwan will have two PST-1010 terminals installed per store. The installations are scheduled to be completed by September 1999. Circle K IS also opening 25 new stores per month from July 1999, until June 2000. All of these new stores will also be fitted with PST-1010's. There will be a total of 1500 POSIFLEX terminals installed at Circle K.

This is one of the largest installations in Taiwan," said Owen Chen, CEO of POSIFLEX. "It was made possible partly because of our excellent reputation for reliability, design and quality," Chen said.
