

# LEADING EDGED TECHNOLOGY

## NEED A HELPING HAND

"Thank you POSIFLEX," Tesoro Technologies, Inc.

When it comes to leading edge Hospitality Software, Volanté Systems by Tesoro Technologies, Inc has it all wrapped up. Written entirely in Java from the ground up and a Linux version up and running, Volanté searched high and low for an integrated terminal that would compliment the software's integrity and image.

The choice was pretty easy once Tesoro Technologies, Inc. saw the POSIFLEX 15 inch integrated terminal. The formula was simple - good looks, robustness, and priced right. In the meantime, Volanté's Sates of the Art technology attracted the Monopoly Nightclub.

A ten thousand square foot hot spot with over 90 employees and the hottest DJ's every Friday and Saturday night and live bands Sunday night. They were searching for software that would adapt to a busy, high-energy nightclub yet have a sophisticated table management feature to control the fine dining business hours daily.

**"Our software looked dynamic on the screen and we knew the POSIFLEX would be the solution for Monopoly."**

When Tesoro Technologies, Inc. demonstrated Volanté with the POSIFLEX to Lynn Leddy, General Manager of Monopoly, she too could see a winning combination. Volanté had a different look. They got away from the block like ugly graphics, circles, squares and limited screens like all the others. It was the first software that the customer could design menus, without limitations. The open hierarchical structure allowed the customer to add as many entries as they required.

Lynn would know. She looked at over 9 tier one and tier 2 software products and demos. Volanté won hands down! They installed eight POSIFLEX integrated terminals and the coup de grâce was the great hand held thin client R/F wireless solution Volanté offered for the complex nightclub environment.
