Posiflex Touch Screen Terminals Connect at NRF2016

Posiflex XT Series of touchscreen terminals offers a base where its own power adapter can be integrated with an optional PoweredUSB and additional functionality on the Posiflex XT3215, XT3815, XT4015 and XT5315 terminals

Posiflex XT Series multifunctional touch screen terminal base is designed to enable a clutter free POS station. The terminal base integrated options include PoweredUSB, second hard drive, battery backup, 8 port hub and the terminals own power adapter.

HAYWARD, Calif.--(BUSINESS WIRE) - POS hardware technology leader [Posiflex](http://www.posiflex.com) will demonstrate its XT Series of touch screen POS terminals at the 2016 National Retail Federation show in booth 3373. The terminals have a uniquely designed base with integrated options, including a wide range of peripheral connectivity, data redundancy and power backup.

The Posiflex XT Series touch screen terminal family offers four product price / performance models. Standard to all XT models is an adjustable base optimizing cashier and customer viewing positions. Additionally, XT Series models offer options inside the terminal base, such as PoweredUSB to directly connect a printer, an 8-port USB hub for multiple peripherals, a battery backup in the event of a power failure, second hard drive for redundancy, and inclusion of the terminal's own power adapter for a clutter-free POS station.

Focus POS California, a Focus POS Systems Reseller, has deployed the XT3215 with its PoweredUSB option to connect the printer directly to the terminal without a cumbersome power adaptor.

"We connect the printer directly to the XT3215 base as it eliminates two power bricks on the floor since the terminal brick is also hidden in the base," said Brandon Wermes, Director of Operations with Focus. "This minimizes tripping hazards, minimizes the number of AC power connections, speeds up installation, and reduces possible points of failure. Posiflex is deployed when quality and reliability count."

Software developer Flightware Solutions deploys Posiflex at Beverage Warehouse, a fourth -generation owned wholesale and retail beer distributor since 1933.

"The XT3815 8-port hub option offers the Beverage Warehouse a complete touch screen upgrade eliminating all legacy parallel, serial and PS2 connections in favor of a tightly organized, reliable and clean USB-driven system to eliminate the typical 'rats nest' of cables," said Adam Scott, Flightware's Director of Operations.

Scott summarizes: "Posiflex terminals are stable with low service needs down the road. XT3815 and XT3215 features and peripherals enhance the software. It's one thing to do software great, but when it runs on a piece of equipment which looks good and runs great, it's a winner."

About [Posiflex](#)

Posiflex is a designer and manufacturer of Point-of-Service and industrial touch terminals with installations globally since 1984 having a long legacy of reliability.
