Posiflex Introduces Stylish New Line of Touch Screen Terminals and 32" Screen Kiosk at NRF 2018

Posiflex launches new, game-changing touch screen and kiosk products for the retail, hospitality and healthcare industries, and will be showcased at the National Retail Federation (NRF) Big Show 2018, booth #3453.

Posiflex unveils an entirely new line of dynamic touch screen terminals that embodies a new era for Posiflex and point-of-sale hardware—the RT series. With an elegant housing and a strikingly thin profile, the RT series provides a welcome addition to Posiflex's product line and comes in two variations: the RT2000 and RT5000.

The all new RT series offers a choice of 15"/4:3 screen or 15.6"/16:9 widescreen. The RT2000 is equipped with an Intel® Celeron® J1900 Quad Core processor, 2MB Cache, 2.0GHz, 4GB DDR3L memory and 64GB SSD. The RT5000 runs on an Intel® Core™ i5-6300 Skylake Dual Core processor, 3MB Smart Cache, 2.40GHz, 4GB DDR4 memory and 128GB SSD.

"The POS terminal is no longer just a cold and hard business tool; it has evolved to be an extension of the brand, offering a more dynamic in-store shopping experience," said Owen Chen, President and CEO at Posiflex Technology, Inc. "The new RT Series radiates simplistic elegance and looks flawless on the counter top without any screws to be found on its surface. Its modern and stunning design can blend into any decor, while the terminal still offers the quality, performance and long-term durability that our customers expect from Posiflex."

The RT series has an intelligently designed rear cover that can effortlessly be removed without tools for quick and easy serviceability. The base also includes an advanced cable management design, minimizing cable clutter. Continuing the renowned legacy of Posiflex reliability, the RT series models are fan-less, spill and dust-resistant, and are tailored to suit multiple markets and environments.

From one of the leading providers of touch screen terminals for point-of-sale and point-of-service markets since 1984, Posiflex continues expansion of its KT Series kiosk product line with the introduction of the new Apollo. With a stunning 32" projected capacitive touch screen display, the Apollo kiosk can easily adapt to stores, restaurants, theaters, theme parks and virtually any setting where a self-service kiosk is suitable.

Following the successful 2017 introduction of the Stellar kiosk, the Apollo, with its large format display, is powered by an Intel® Core™ i3-6100U Processor, 4GB of DDR4 Memory and a 64GB or larger solid state drive. Easily adapting to its environment, the Apollo's sleek footprint allows for stand or wall mount deployment, even in areas with minimal floor space.

The Apollo comes standard with a built-in 3" receipt printer and can be customized with a variety of integrated modular options, including EMV payment devices, MSR, NFC, fingerprint reader, 2D barcode scanner, front-facing camera and proximity sensor.

Backed by the renowned Posiflex quality and reliability our customers have come to expect, coupled with performance and feature flexibility, the Apollo kiosk is the ideal solution for all self-service needs.

About Posiflex

Posiflex has a long legacy of exceptional touch screen terminal and peripheral quality where reliability is designed from the start. With rigorous third-party pre and post manufacturing and field testing since 1984, Posiflex terminal reliability has withstood the test of time. www.posiflexusa.com
