PC Complete Announces Business Alliance & Certification With Posiflex Point-of-Sale Systems and Peripherals

Today, PC Complete announced its business alliance with Posiflex Business Machines, Inc. and the certification of its web-based NetPOS point-of-sale application with Posiflex point-of-sale hardware systems and peripherals. NetPOS, owned by PC Complete, researched the hardware market extensively to select the best of breed in point-of-sale hardware to deploy with its NetPOS software application. After pilot-testing the 15" LCD JIVA terminal offered by Posiflex, the decision was easy. Posiflex provides a variety of high-performance integrated touch terminals that are designed to withstand the harshest of environments. The terminals also include unique features tailored for point-of-sale. All Posiflex products are backed with a three-year manufacturer's warranty. PC Complete is an authorized Posiflex service and repair facility enabling them to service Posiflex hardware in-house. "Offering our award winning NetPOS software combined with top-notch hardware from Posiflex provides tremendous value to our customers", stated Marshall Miller, President of PC Complete. The NetPOS software has been tested and certified for use with all model Posiflex terminals.

Posiflex Marketing Director, Tim Becerra noted, "Posiflex is excited to announce another strategic partner alliance that allows PC Complete the opportunity to display the power and flexibility of the NetPOS point-of-sale application on our JIVA touch terminal. We envision a very bright future for NetPOS and look forward to supporting them with their marketing efforts to increase their brand-awareness throughout North America."

The NetPOS web-based point-of-sale solution, bundled with Posiflex hardware, is currently available from PC Complete.
