

**For Immediate Release**

**Intura Solutions Signs Premier Strategic Business Partner Relationship with POSIFLEX**

**ARLINGTON, Texas — August 31, 2006** — Intura Solutions, LP (Intura), a leading supplier of point-of-sale (POS) and business management software for delivery and quick-service restaurant concepts, today announced they have joined the Premier Strategic Business Partner program with POSIFLEX Business Machines, Inc. (POSIFLEX), a worldwide engineering and design point-of-sales hardware manufacturer based in Hayward, California. The Premier Strategic Business Partner program consists of a group of independent software developers committed to POSIFLEX as their key hardware platform.

“Intura has partnered with POSIFLEX for two years in which time they have achieved a select status within the POSIFLEX Strategic Business Partner program. Intura offers a focused solution approach towards their customers with quality-valued software and hardware products and POSIFLEX is honored to partner with Intura” stated Scott Johnston, vice president of sales of North and South America for POSIFLEX. “POSIFLEX has witnessed Intura’s consistent growth, dedication, commitment and integrity towards their customers’ satisfaction. POSIFLEX values Intura’s ongoing commitment to excellence as well as their ever increasing customer base.”

After evaluating a number of point-of-sale workstations, Intura selected and began shipping POSIFLEX equipment in early 2005. The primary factors used in the selection process centered on performance, design, reliability, quality and service. The Intura Vision POS system, designed for ease of use, is fast and the footprint is compact with the POSIFLEX Jiva workstations. Intura Vision takes advantage of all of the integrated peripheral options including the touch screen, customer display, magnetic stripe reader and biometric fingerprint recognition.

The complete integrated system along with POSIFLEX's cash drawers and Aura thermal printers provide all the tools necessary for a successful restaurant operation with the hardware being sourced from one vendor.

“Intura is excited about this enhanced relationship because it brings the opportunity to work more directly with the entire POSIFLEX team as well as develop our applications for new technology being engineered for use by our customers” stated Gary W. Peek II, president of Intura. “Intura’s customers have been very pleased with the POSIFLEX product line due to factors important to them such as durability, performance and small footprint.”
