Maitre'D achieves validation with Visa Payment Card Industry Data Security Standard (PCIDSS)

Montreal, Quebec - May 11, 2006 – Posera announced today that its Maitre'D 2005 SP3 and Maitre'D 2003 SP11 versions have achieved validation with the Visa Payment Card Industry Data Security Standard (PCIDSS) (also called the Visa Cardholder Information Security Program or CISP).

Posera recognizes that security is now a top priority for the restaurant industry. "Keeping our customers and their interests at the forefront is our main concern." says Mr. Jim Gillis, President at Posera Software Inc. "For this reason, we took CISP very seriously, and we went a step further by having not only our current POS software validated, but also the previous version; Maitre'D 2003."

Posera is committed to maintaining a secure and reliable platform that will help its customers in protecting themselves against security threats. Posera will continuously work with these organizations in implementing security recommendations in order to assist its customers in protecting sensitive cardholder data. For more information on CISP, www.visa.com/cisp.

About Posera & Maitre'D

Posera Software provides the restaurant industry with the latest technologies that offer flexibility, simplicity and increased efficiency. Maitre'D software encompasses seamlessly integrated solutions that provide managers with the tools that they need to improve their operations and management. These solutions are designed to meet any concept's specific needs, with fully customizable POS, Back-Office, Corporate and ASP applications. Posera is a global solution provider that operates offices in Seattle, Montreal and Glasgow, and has a reseller network that covers North America, Europe, the Middle East, Africa, Singapore, and Australia.
