

New JIVA Terminal Screwless Design Draws Rave Reviews

You may not realize a difference when looking at the JIVA 5000/6000/7000 currently being delivered to your company. But once you pop the bezel you will quickly realize that a NEW FINGER RELEASE design has been implemented to expedite repairs.

In an ongoing effort to listen closely to our partner's needs, POSIFLEX continually reviews its products to meet market demands. We hope this new design change brings a smile to everyone who services the JIVA terminal.

1
JIVA Touch terminal

2
Detach the Front Bezel

3
Pressing down on the two spring clips, lift both sides of the top LCD chassis to open

4
Lift up the LCD panel chassis

5
To remove the metal cover plate from the main chassis, press down on the spring button and slide cover to right to remove the riser card cover. Pull the riser card cover out, disconnect riser card and remove LCD chassis.

7
Remove "ONE" screw. Slide the metal plate down hard and lift plate to access hard drive and mainboard.
