

## ★ Product Color Change

Beginning January-2005, POSIFLEX has changed the color of its light-colored products from beige to ivory white. The purpose was to slightly alter the tint so that our partners can mix and match POSIFLEX peripherals with other systems and peripherals to create a consistent look and feel at the POS station. We hope this change will be beneficial to our partners who combine different hardware makes in the field.

## ★ JIVA 5800 CPU Upgrade to 1.0 GHz

In the winter of 2004, POSIFLEX upgraded the VIA CPU for both JIVA 5000 model terminals. In an effort to stay technologically current, the JIVA 5715 CPU was changed from 400MHz to 800MHz and the JIVA 5815 from 800MHz to 1.0GHz. Don't forget to update your order forms and marketing materials to reflect this change.

## ★ JIVA 5700 Windows CE.NET

POSIFLEX now offers CE.NET featuring native OPOS drivers for the JIVA 5700 series touch terminal. The native OPOS drivers accommodate the AURA clamshell thermal printer; CR4210C cash drawer and PD302C integrated LCD customer display. For more information, contact your POSIFLEX regional sales manager.
